EDUCATION

Purdue University

Bachelor of Arts in Computer Science / Math

West Lafayette, IN

2018 – 2022

EXPERIENCE

Software Engineer

Meta

April 2026 – Present

Menlo Park, CA

- Built health checks for pre-filtering traffic across hundreds of millions of daily link requests, enabling early detection of anomalies before downstream safety processing.
- Developed data pipelines on the Link Safety team to support URL screening infrastructure and scaled up to millions of requests, improving system reliability and observability.
- Collaborated on safety systems identifying and blocking malicious links supporting integrity efforts across Meta's platforms.

Software Engineer

General Motors

Jan 2023 – March 2026

Warren, MI

- Designed and deployed automated ETL pipelines with Python and SQL with real-time anomaly alerts, eliminating manual monitoring processes and saving 10+ hours per week in stakeholder response time.
- Built and migrated existing and legacy dashboards using Power BI leveraging Apache spark and large-scale Azure/AWS/Databricks data lakes to improve scalability and performance.
- Analyzed electric battery pack build locations to leverage tax incentives resulting in \$1.5M current cost savings.
- Developed and trained an XGBoost based machine learning algorithm to detect fires in electric vehicles.
- Fine tuned a Retrieval-Augmented Generation (RAG) LLM to translate complex technical information into accessible insights for non-technical stakeholders.
- Standardized data ingestion and resolved data pipelines bottlenecks across teams, increasing data retention by 33%..
- Acted as the primary data expert, delivering data-driven insights and interpreting complex datasets, leading to a 27%. reduction in data processing time.

Associate Software Engineer

Engineering Innovation

Sep 2021 – Aug 2022

West Lafayette, IN

- Refactored and debugged Python backend systems using MVC and ORM frameworks to support customer-facing tools.
- Applied NLP with Elasticsearch to improve client search result relevance by 7%.

Lead Engineer

Mind Mantra Tutoring

Sep 2020 – Present

West Lafayette, IN

- Built machine learning pricing algorithm using Scikit-learn and TensorFlow to improve customer retention.
- Developed a customer-facing dashboard for clients to monitor progress and finances using Node.js, SQL, and AWS RDS and implemented CI/CD pipelines.

TECHNICAL SKILLS

AI & ML: PyTorch, TensorFlow, Scikit-learn, XGBoost, RAG, LLM fine-tuning, Cvxpy, Pandas

Languages: Python, Java, C/C++, C#, Javascript, Swift, Hack, PHP, SQL (Postgres), HTML/CSS, R

Frameworks: React, Node.js, Flask, JUnit, WordPress, Material-UI, FastAPI

Devops: AWS RDS, CI/CD, Virtual Machines, GCP, Azure, Spark, Kubernetes, Docker, Railway

Tools: Databricks, Tableau, PowerBI, MongoDB, Xcode
